The excess of metal at the top of the Lincoln cent is called a cud. It is caused when a piece of metal breaks from the die face and leaving a hole into which the metal flows as the coin is struck. Spot the doubled die error.

Behind jazz discography is a fraught and highly colorful history of research, fanaticism, and the intense desire to know who played what, where, and when. This history gets its first full-length treatment in Bruce D. Epperson's *More Important Than the Music*. Following the dedicated few who sought to keep jazz's legacy organized, Epperson tells a fascinating story of archival pursuit in the face of neglect and deception, a tale that saw curses and threats regularly employed, with fisticuffs and lawsuits only slightly rarer. Epperson examines the documentation of recorded jazz from its casual origins as a novelty in the 1920s and '30s, through the overwhelming deluge of 12-inch vinyl records in the middle of the twentieth century, to the use of computers by today's discographers. Though he focuses much of his attention on comprehensive discographies, he also examines the development of a variety of related listings, such as buyer's guides and library catalogs, and he closes with a look toward discography's future. From the little black book to the full-featured online database, *More Important Than the Music* offers a history not just of jazz discography but of the profoundly human desire to preserve history itself.

It is not surprising that Australian grassfinches are highly popular with ornithologists and aviculturists, and included among the species are one of the most beautiful of all birds – the Gouldian Finch *Erythrura gouldiae* – and one of the most familiar cagebirds – the Zebra Finch *Taeniopygia guttata*. Despite a scarcity in published works on finches, interest in the species is growing, leading to dramatic advancement in our knowledge of many species. For example, we have gained new information from field observations carried out on little-known species, including the Blue-faced Parrot-Finch *Erythrura trichroa* and the Red-eared Firetail *Stagonopleura oculata*. Significant advances in taxonomic research, largely as a consequence of the development and refinement of biochemical analyses, often involving DNA-DNA hybridisation, have given us a new insight into relationships among species, with some unexpected alliances being determined. Additionally, dramatic changes have taken place in avicultural practice and in virtually all countries aviculture has taken on a new professional approach, with the most notable results being increased productivity and success with a wider variety

species. After a lapse of almost half a century since publication of Klaus Immelmann's eminent work on finches, based on extensive field studies, the time has come for a new examination of Australian grassfinches. In *Grassfinches in Australia*, Joseph Forshaw, Mark Shephard and Anthony Pridham have summarised our present knowledge of each species, and have given readers a visual appreciation of the birds in their natural habitats and in aviculture. The resulting combination of superb artwork and scientifically accurate text ensures that this volume will become the standard reference work on Australian grassfinches. In addition to enabling aviculturists to know more about these finches in the wild as a guide to their husbandry techniques, detailed information on current management practices for all species in captivity is provided. The book also includes colour plates depicting some of the more common mutations held in Australian and overseas collections. The term 'record collecting' is shorthand for a variety of related practices. Foremost is the collection of sound recordings in various formats - although often with a marked preference for vinyl - by individuals, and it is this dimension of record collecting that is the focus of this book. Record collecting, and the public stereotypes associated with it, is frequently linked primarily with rock and pop music. Roy Shuker focuses on these broad styles, but also includes other genres and their collectors, notably jazz, blues, exotica and 'ethnic' music. Accordingly, the study examines the

history of record collecting; profiles collectors and the collecting process; considers categories - especially music genres - and types of record collecting and outlines and discusses the infrastructure within which collecting operates. Shuker situates this discussion within the broader literature on collecting, along with issues of cultural consumption, social identity and 'the construction of self' in contemporary society. Record collecting is both fascinating in its own right and provides insights into broader issues of nostalgia, consumption and material culture.
