The best handbook on chart usage, from one of the most trusted names in boating In 2000, the U.S. government ceased publication of Chart No. 1, the invaluable little book that generations of mariners have consulted to make sense of the complex system of signs, symbols, and graphic elements used in nautical charts. Now Chart No. 1 is not just reborn but expanded and improved in *How to Read a Nautical Chart*. The demand for a book like this has never been greater. Arranged and edited by Nigel Calder, one of today's most respected boating authors, --and containing four-color illustrations throughout,-- *How to Read a Nautical Chart* presents a number of original features that help readers make optimum use of the data found in Chart No. 1, including a more intuitive format, crucial background information, international chart symbol equivalents, electronic chart symbology, and thorough explanations of the practical aspects of nautical chart reading. Selected for their relevance and usefulness to Federal records managers, the terms in this glossary come from related disciplines, such as ADP, as well as traditional records management. Containing many terms, abbreviations, and acronyms relating to the management of electronic, microform, and other records, Section I provides definitions of terms. Section II

lists selected abbreviations and acronyms with their meanings. This is the essential resource for any photographer shooting monochrome in the digital age. It takes a head-on professional approach to black and white photography within a Photoshop/Lightroom workflow. This report provides estimates of outage frequencies, durations, and probabilities at eight United States locations for a satellite EHF communication system employing a frequency of 30 GHz and a fade margin of 15 dB. Ten years of 1-min rain rates at each location were used in conjunction with a attenuation model to make the estimates. One-min rates are recognized as most practical for these calculations, but are ordinarily unreadable from original recordings is described. Analyses of the 1-min rain rates and outage estimates for elevation angles of 10 deg, 30 deg, 50 deg, and 70 deg are presented. Keywords include: Rainfall, Attenuation, EHF communications, and Satellite communications. Explains how to upgrade and repair processors, memory, connections, drives, multimedia cards, and peripherals. In spring this year it will be 35 years since I began to study rotation technique as applied to radiology. In 1947 the name rotation radiography was publicly adopted for the application of this technique to roentgenography. Since then our study has revealed that the technique in presenting the axial transverse cross section figure is valuable not only in diagnosis but also in radiotherapy. Our books on "Conformation Radiotherapy - Rotation Technique as Applied to Radiography and Radiotherapy of Cancer" and "An Atlas of Axial Transverse Tomography and its Clinical Application" were published by Acta Radiologica, Stockholm in 1965 and Springer Verlag in 1969 respectively. Having excellent contrast resolution computed tomography can be considered an advanced type of rotation radiography. With this in mind I planned to edit and publish the Illustrated Computer Tomography as the latest presentation in a series of publications on rotation radiography. The editor would like to express his deep appreciation to the contributors to this book as well as to the publishers Shujunsha, Japan and Springer Verlag. Action Camera Underwater Video Basics shows how to capture fantastic video and turn it into engaging sequences. The book focuses on small action cameras – the format which includes devices made by GoPro, SeaLife and Paralenz – all of which have more depth to them than one might first imagine. Award-winning underwater cameraman Jeff Goodman

shows how versatile they can be and how to get the best out of them. Every one of the 200+ images in the book was shot with an action camera. The book looks at important camera features and cuts through the dizzying array of equipment choices. Homing in on what is useful for underwater videoing, Jeff then provides the vital background knowledge key to achieving great results, time after time, whatever device you use: How to avoid the typical mistakes made by many budding underwater filmmakers. Capture better shots and turn them into engaging sequences. An introduction to the editing process – simple techniques to make the best videos. Jeff also explains how to use action cameras to take better underwater stills, both in the water and later from the video which has been shot. The book concludes with two exercises that put the theory into practice. Although technology moves on at a pace, some things will always remain true. Nowadays shooting exclusively with tiny action cameras, Jeff shares a lifetime of essential underwater video know-how in one handy book. "The classic How to Read a Nautical Chart explains every aspect of electronic and paper nautical charts: how a chart is assembled, how to gauge the accuracy of chart data, how to read charts created by other governments, how to use information such as scale, projection technique and datum that every chart contains; how not to get fooled or run aground by overzooming. Nigel Calder teaches you how to squeeze every ounce of information out of a nautical chart (on your GPS, chartplotter, or nav station) and understand the limits of accuracy for all charts, paper and electronic, raster and vector."--Publisher's website. The 11th International Conference on the Principles and Practice of Constraint Programming (CP 2005) was held in Sitges (Barcelona), Spain, October 1-5, 2005. Information about the conference can be found on the web at <http://www.iiia.csic.es/cp2005/>. Information about past conferences in the series can be found at <http://www.cs.ualberta.ca/~ai/cp/>. The CP conference series is the premier international conference on constraint programming and is held annually. The conference is concerned with all aspects of computing with constraints, including: algorithms, applications, environments, languages, models and systems. This year, we received 164 submissions. All of the submitted papers received at least three reviews, and the papers and their reviews were then extensively discussed during an online Program Committee meeting. As a result, the Program Committee chose 48 (29.3%) papers to be published in full in the proceedings and a further 22 (13.4%) papers to be published as short papers. The full papers were presented at the conference in two parallel tracks and the short papers were presented as posters during a lively evening session. Two papers were selected by a subcommittee of the Program Committee--consisting of Chris Beck, Gilles Pesant, and myself--to receive best paper awards. The conference program also included excellent invited talks by Hector Ge?ner, Ian Horrocks, Francesca Rossi, and Peter J. Stuckey. As a permanent record, the proceedings contain four-page extended abstracts of the invited talks.
